
Plezero

Release 1.0

Piotr Sroczkowski

October 30, 2015

1	Introduction	3
1.1	Basics	3

P l e z u r o

Plezuro is a scripting language.

The main version is compiled to Javascript.

```
$f = {this + first * 2};  
$y = f(2, f(5, 9));  
[y, y]
```

Introduction

This is introduction.

ghjkl

1. blabla

- ggggg

1.1 Basics

1.1.1 Variables

Before we can use any variable, we have to declare it. It is pretty simple, just write the name of the variable and the dollar sign ('\$') immediately before it. In next occurrences of a variable, you should write it without the dollar sign.

In Plezuro there is dynamic typing like in other dynamic languages such as Python, Ruby or Javascript. Also everything is a variable (including functions and modules).

```
// number
$a = 34;

// string
$b = 'abc';

// list
$c = [a, b];
```

```
// associative array  
$d = %('a': a, 'b': b)
```
